SUMMARY

Frontend software engineer specializing in design systems to improve UI consistency and codebase maintainability. Passionate about accessibility and user experience to ensure that web applications are easy to use for everyone.

WORK EXPERIENCE

Senior Software Engineer, Frontend
BambooHR, Draper, UT (Dec 2020 - Sept 2026)

Frontend web application development for both customer-facing and internal tools with a focus on accessibility
- Created, maintained, and documented reusable React components for our design system component library, ensuring ease of use for developers and accessibility for users
- Led accessibility initiatives to increase compliance with WCAG 2.2 AA standards
- Identified and remediated accessibility violations using automated scanning tools and manual testing with a screen reader
- As team technical lead, worked with designers and product manager to determine technical requirements and feasibility for upcoming projects
- Planned and executed site-wide page structure changes to make the website responsive and support mobile devices, facilitating growth into new customer sectors
- Incorporated AI tools throughout the software development lifecycle to optimize workflow
- Created AI skills and agents to streamline processes and facilitate internal developers consuming our component library

Senior Web Developer
O.C. Tanner, Salt Lake City, UT (Jun 2015 - Nov 2020)

Frontend web application development with a focus on internationalization and accessibility
- Team lead for the three frontend developers on our cross-functional team
- Supported legacy and modern systems that served large and international corporate customers
- Coordinated with product management, UX designers, test engineers, and fellow developers to create new features and improve development workflow
- Updated multiple apps and custom component library to meet WCAG 2.0 AA accessibility standards
- Updated UI to improve user experience and increase application security
- Increased unit test coverage to more than 80% to ensure code quality
- Handled build, packaging, and deployment processes for multiple web apps

Web Developer
FamilySearch, Salt Lake City, UT (Sept 2011 – May 2015)

Frontend web development creating a genealogy family tree web app using AngularJS in a Node.js environment
- UI/UX with a focus on internationalization
- Testing/TDD using Karma, Mocha, JSDom
- Used and configured build tools including Webpack and Babel

WORK EXPERIENCE

Webmaster, Bookkeeper
Nuttalls, Inc., Salt Lake City, UT (Aug 2008 – Sept 2011)

- Wrote a PHP/MySQL-based program to handle accounts receivable
- Redesigned and upgraded the company website to enable customer feedback, improve the user experience in social forums, and make the website responsive
- Maintained the company website, computer systems, and network
- Created daily balance sheets for each of four stores and managed accounts receivable

Engineering Assistant, System Safety and Mission Assurance Division
Hernandez Engineering at NASA Ames Research Center
Moffett Field, CA (summers 2000 – 2003)

Revised two safety documents for a payload which flew on the Space Shuttle
Safety analysis for the Licancabur Expedition, a SETI project

- Identified potential safety hazards and wrote hazard reports
- Worked with domain experts to develop mitigation strategies for potential safety hazards
- Prepared presentations for two Safety Review Boards

Associate principal investigator in assessing and recommending changes to the existing quality inspection stamp process

EDUCATION

BS Physics – Astronomy
Mathematics minor
Brigham Young University
2000-2004

SKILLS

- Web Accessibility
- Accessibility Testing
- Responsive Design
- Design Systems
- Component Libraries
- Storybook
- JavaScript
- TypeScript
- HTML
- CSS
- React
- Node.js
- SaaS
- CI/CD
- REST
- Microservices
- Micro-frontends
- Frontend Architecture
- AI Agents
- AI Skills
- Claude Code
- Cursor
- Git
- Agile/Scrum
